WHY DON'T BIRDS GET SHOCKED ON POWER LINES?!

A4 STEM Science Activity & Vector Coloring Sheet for Kids • zentomedia.net

1. Zero Voltage Diff
Both feet grasp the same wire! Voltage at both feet is identical, so Delta V = 0, no current can flow!

2. Path of Least Resistance
Metal wires have ultra-low resistance (R ≈ 0.001Ω), while a bird's body has high resistance. Current chooses the easy wire!

3. Safety Warning
Touching a grounded pole or another wire closes the circuit and zaps! Never climb electrical poles or fly kites near wires!

CIRCUIT MAZE: GUIDE THE ELECTRON SAFELY HOME!

Draw a pencil line from Start (S) to Finish (F)
